

Indoor Signposting and Wayfinding through an Adaptation of the Dutch Cyclist Junction Network System

Antigoni Makri
Edward Verbree

26 November 2014

Wayfinding ... there are many ways

13:45–14:55 – 10 and 15 minutes slots (Chair: Karl Rehrl, Salzburg Research)

Wayfinding and Navigation II

Anita Graser, Markus Straub, Melitta Dragaschnig – 15 minutes

Is OSM Good Enough for Vehicle Routing? A Study Comparing Street Networks in Vienna

Carolin von Groote-Bidlingmaier, David Jonietz and Sabine Timpf – 15 minutes

Calculating Route Probability from Uncertain Origins to a Destination

Jukka Krisp, Andreas Keler and Nicole Karrais – 10 minutes

Personalized Routing for Car Navigation Systems

Lucia Tyrallová, Carolin Kucharczyk, Lasse Scheele and Hartmut Asche – 10 minutes

Towards a Dedicated Data Model for Seamless Pedestrian Navigation

Antigoni Makri and Edward Verbree – 10 minutes

Indoor Signposting and Wayfinding through an Adaptation of the Dutch Cyclist Junction Network System

Nimalika Fernando, David A. McMeekin and Iain Murray – 10 minutes

Context-aware Navigation Model Supporting Way-finding for Vision Impaired People in Indoor Environments

Airport

Arrivals / Departures

- Schiphol Amsterdam
 - Mijksenaar
- Vienna
 - Ruedi Baur

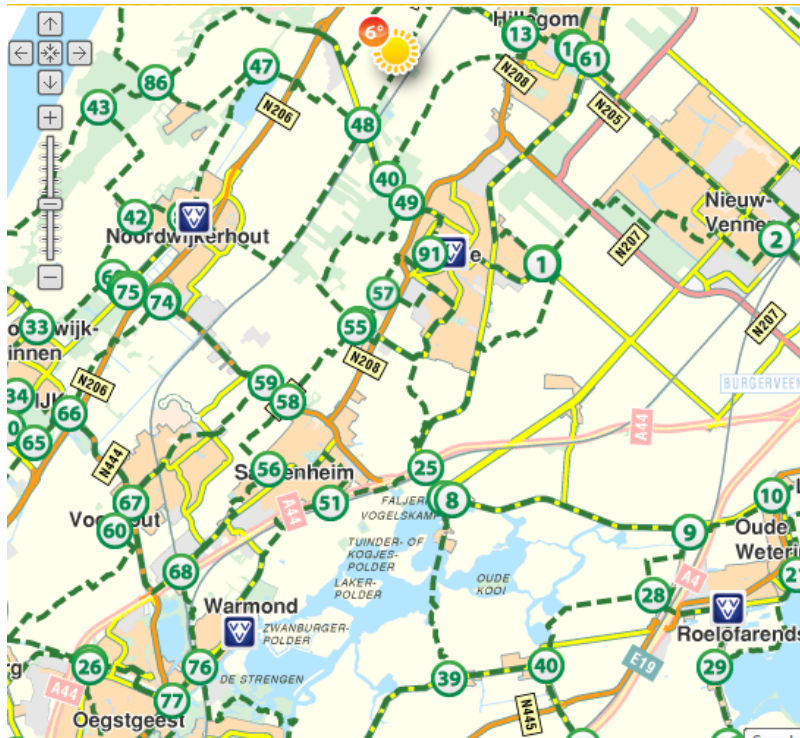

Indoor Signposting and Wayfinding Adaptation

- Problem:
 - The existing indoor wayfinding systems do not consider the presence of salient objects in order to enhance wayfinding efficiency
- Objective:
 - To propose a wayfinding system for indoor settings in order to direct to a user-specified destination by incorporating the concept landmark-signs
- Method:
 - Using as a reference an already existing outdoor system and adapting it to the case of indoor navigation

Cyclist Junction Network System

Available, accepted, and proven

**KANOCENTRUM
ARJAN BLOEM
KAJAK.NL**

Poelweg 1b - 1531 MD Wormer - Tel. 075-6218805
VAN 1 APRIL TOT 1 OKTOBER: 7 DAGEN PER WEEK GEOPEND

Kanoverhuur

maandag t/m vrijdag

10.00 - 18.00 uur

€ 5,- p. persoon
'onbeperkt'

Wormer en Jisperveld

- Kano-boten verhuur
- Knooppunt met infopaneel tevens overstapplaats
- Horeca gelegenheid
- Bezoekerscentrum Poelboerderij
- Botanische locatie Kneppelsoord
- Picknickplaats
- Knooppunt met kaart

Het kano-route-netwerk

U bepaalt zelf uw route en het aantal meters dat u wilt varen, vrijheid & flexibiliteit staan voorop. U kunt in twee richtingen varen, van knooppunt naar knooppunt via genummerde borden. Onthoud het nummer van de startplaats waar u uw vaartocht begint, zodat u indien gewenst op het beginpunt ook weer kunt eindigen. Op de plattegrond ziet u een aantal nummers, dit zijn de zogenaamde "knooppunten". U volgt de genummerde borden in de richting van de pijl van knooppunt naar knooppunt. Op elk knooppunt kunt u een keuze maken in welke richting u uw vaarroute wenst te vervolgen. Op iedere knooppunt staat een plattegrond.

Regels

- Huurder is aansprakelijk voor schade, vermissing en schade aan de dieren.
- Geef voorrang aan beroepsvaart en aan motor- en zeilboten.
- Hinder geen vissers.
- Spaar de natuur zoals rietoevers en verstoor geen vogels.
- Ga alleen aan land op daarvoor bestemde uitstap plaatsen.
- Honden mogen nergens aan land.
- Neem afval mee naar huis.
- Bij slecht weer geen verhuur
- Reservering mogelijk met vermelding tijdsduur
- Verhuurperiode: 1 april - 1 oktober
- Bijzondere Feestdagen gesloten: Koningsdag, 1st Paasdag, Hemelvaartsdag en 1st Pinksterdag.

Junction Network System for Indoor Settings

- Original System:
 - A user-specified route is determined by sequence of numbers indicated by special landmark-signs on selected ('best') roads.
- Adapted Concept:
 - Creation of a **complete network** of locations, equipped with a special type of sign, so that **any possible route** in an indoor setting can be mapped out.
- Design Requirements:
 - What information should be presented?
 - Where will the information be provided?
 - In what form?

Assistance is provided where to take a decision on how to go on

- Based on an already existing and recognized system
- A unique identifier playing many roles
 - Decision point
 - Destination
 - Place, Room (in between two decision points)
- Spatial reference supported
 - Topographic / Schematic map / guide
- No need for use of special equipment by the wayfinder
- Suitable for wayfinders not familiar with electronic devices
- Applicable to various types of buildings

Building Blocks

Design of the landmark-signs: Floor-mounted (open space)

Environment Representation

- Navigable space: Connecting spaces between destination points
- Graph model to represent the structure of the building
 - Decision points are mapped as nodes of the graph
 - Links between the nodes are the edges of the graph

Implementation

Connecting Space Subdivision

Constrained Delaunay Triangulation

Implementation: Non-constrained triangles

Decision Point = Landmark-sign

Two Criteria:

- overlap relationship between originating polygon and generated triangular sub-spaces
- semantics of the indoor space

Implementation

Network of Numbered Locations

Network Generation:

- more dense for connecting spaces, decision points and middle points of constrained edges
- destination and transition spaces represented by their central points

Other test-site

Faculty of Architecture

- Complex building
- Contains large open spaces
- Existing wayfinding system needs improvement
- Large number of users

Next Steps – other test-site

Faculty of Architecture

- Improve decision point locations by using Conforming Delaunay Triangulation
- Perform test survey
- Conclusions & recommendations

Thank you very much for your attention!
